

SOLUTION MANAGEMENT ACCOUNTING AND CONTROL NOV 2007

QUESTION 1

Uncle Pee

a) Relevant Costs Budget Statement

| | GH¢ | GH¢ |
|--------------------------------------|--------------|---------------|
| Contract Price | | <u>20,000</u> |
| Material A (1,000 x 6) | 6,000 | |
| Material B (1,000 x 5) | 5,000 | |
| Material C (1,000 x 4) + (700 x 2.5) | 2,950 | |
| Material D | <u>1,500</u> | |
| | | 15,450 |
| Labour: | | |
| Grade X Wages | - | |
| Grade Y wages (200 x 3.5) | 700 | |
| Contribution forgone (200 x 4) | <u>800</u> | 1,500 |
| Variable overheads: | | |
| Grade X (50 hr x 1) | 500 | |
| Grade Y (200 hrs x 1) | <u>200</u> | 700 |
| Fixed overhead expenditure: | | |
| Incremental hire costs | 300 | |
| User cost of other contract | <u>200</u> | |
| | | 500 |
| Consultant Fee | | <u>300</u> |
| Net benefit from the contract | | <u>1,550</u> |

Advise

The contract is worthwhile and should be undertaken by Uncle Pee

b) Conventional Cost Statement

| | GH¢ | GH¢ |
|--------------------------------|------------|----------------|
| Material A | 6,000 | |
| B (600 x 2) + (400 x 5) | 3,200 | |
| C (700 x 3) + (300 x 4) | 3,300 | |
| D (200 x 4) | <u>800</u> | |
| | | 13,300 |
| Labour: | | |
| Grade X (500 x 3) | 1,500 | |
| Grade Y (200 x 3.5) | <u>700</u> | |
| Contribution forgone | | 2,200 |
| Variable overheads (700 x 1) | | 700 |
| Fixed overhead (250% of 2,200) | | 5,550 |
| Consultant Fee | | 300 |
| Machinery: Special Machine | 300 | |
| Depreciation (3 months) | <u>900</u> | <u>1,200</u> |
| | | 23,200 |
| Contract Revenue | | <u>20,000</u> |
| Loss on contract | | <u>(3,200)</u> |

Advise

The project should not be undertaken.

QUESTION 2

(a) Monthly Production Budget

| | <u>March</u> | <u>April</u> | <u>May</u> |
|---------------------|----------------|----------------|----------------|
| | Units | Units | Units |
| Budgeted Sales | 180,000 | 240,000 | 250,000 |
| Closing Stocks | <u>48,000</u> | <u>50,000</u> | <u>46,000</u> |
| | 228,000 | <u>290,000</u> | <u>296,000</u> |
| Less Opening Stocks | <u>36,000</u> | <u>48,000</u> | <u>50,000</u> |
| Production required | <u>192,000</u> | <u>242,000</u> | <u>246,000</u> |

(b) Monthly Purchases of Raw Materials

| | <u>March</u> | <u>April</u> |
|--|----------------|------------------------|
| Materials needed for production at ½ kg per unit | 96,000 | 121,000 |
| Minimum month end stock (note 1) | <u>48,400</u> | <u>49,200</u> |
| | 144,400 | 170,200 |
| | <u>45,600</u> | <u>69,600</u> (note 2) |
| | 98,800 | 100,600 |
| Less opening stock | | |
| Actual purchases (40,000 multiple) | <u>120,000</u> | <u>120,000</u> |
| Surplus purchases | <u>21,200</u> | <u>19,400</u> |

Note 1 - March: Minimum month end stock = 40% of ½ kg x 24,200 units
April: Minimum month end stock = 40% of ½ kg x 24,600 units

Note 2 - The minimum month end stock in March plus surplus purchases in March (48,400 x 21.200)kg

Closing stock at the end of April will be the minimum stock of 49,200 kg plus surplus purchases of 19,400 kg i.e. 68,600 kg.

(c) Cash Forecast for April

Receipts from customers:

| | |
|---|---------------------------|
| i) For invoices sent out on 15 March (50% of 360,000) Those not taking a discount 49½ x 180,000 | 89,100 |
| ii) For invoices sent out on 31 March (50% of 360,000) Those taking a discount 50% of 180,000 x 98% Those not taking a discount 49½ x 180,000 | 88,120 89,100 |
| iii) For invoices sent out on 15 April (50% of 480,000) Those taking a discount 50% of 240,000 x 98% | <u>117,600</u> 384,000 |

Payments

| | |
|---|---------------|
| Payment for raw material bought in March (120,000 x GH¢1) | 120,000 |
| Direct wages (242,000 units x GH¢2) | 96,800 |
| Variable production overhead (192,000 units x 0.2) | 38,400 |
| Fixed production overheads (GH¢23,000 – 8,000) | 15,000 |
| Administration overhead (GH¢60,000 – 800) | 59,200 |
| Selling expenses (10% of March sales of GH¢560,000) | <u>36,000</u> |
| | 365,400 |
| Surplus of receipts over payments | 186,000 |
| Cash balance b/f 1 April | <u>12,000</u> |
| Cash balance c/f 30 April | <u>30,600</u> |

QUESTION 3

a)

From: Management Accountant
To: Head, Finance and Administration
Subject: **Alternative Budget Models**
Date: 23rd Nov. 2006

Introduction

Main body

Zero based budgets start with the concept that no item of cost is included unless justified.

Advantages

1. Involves line managers in the resource allocation decision.
2. Encourage such managers to see the activities of their departments as a portfolio that can be examined.
3. Promotes a search improved package delivery.
4. Emphasis that any cost incurred should be matched with traceable benefit.

Disadvantage

1. The zero assumption may be seen as threatening
2. Requires an honest approach to the cost-benefit assessment.
3. Same benefits may be difficult to justify in financial terms.
4. The initial introduction may be very time consuming and costly.

Incremental Budgeting

An incremental budget is one which is set using last year's results or budget as a starting point.

Advantages

1. Easy to prepare
2. Easy to understand
3. Assumptions are simple
4. It is not labourious

Disadvantages

1. The previous year's inefficiencies are perpetuated.
2. Inappropriate uses of resources are not curtailed.
3. An adverse behavioural impact may occur
4. Managers may spend their allocated budget unnecessarily to ensure that they are allocated the same level of resources in the next year's budget.

(b) (i)

- It is activities which derive cost and the aim is to control the causes of costs directly rather than the costs themselves.
- Not all activities add value so it is essential to differentiate and examine activities for their value-adding potential.
- The majority of activities in a department are driven by demands and decisions beyond the immediate control of the budget holder. This relationship is ignored by conventional budget.
- More immediate and relevant performance measures are required than are found in conventional budgeting systems.

(b) (ii)

- Clear guidelines
- Effective communication
- Participation by all levels of management
- Goal congruence
- Proper and effective coordination
- Regular and systematic monitoring
- Education
- Assignment of authority and responsibility
- Creation of responsibility centres
- Motivation
- Flexibility

QUESTION 4

- (a) A mathematical model which uses the tree diagram with affixed probabilities and units of products to make decisions. The decision tree utilizes expected value criterion to arrive at decisions. The tree is composed of decision points and random outcome points linked up by lines

Table of Expected Values

| Grade of Rice | Probabilities | Retailer 1 | | Retailer 2 | | Retailer 3 | |
|---------------|---------------|------------|----------------|------------|----------------|------------|----------------|
| | | Investment | Expected value | Investment | Expected value | Investment | Expected value |
| A | 2/10 | 15 | 3.0 | 17 | 1.4 | 20 | 4.0 |
| B | 3/10 | 25 | 7.5 | 43 | 12.9 | 20 | 6.0 |
| C | 3/10 | 17 | 5.1 | 15 | 4.5 | 30 | 9.0 |
| D | 2/10 | 43 | 8.60 | 25 | 5.0 | 30 | 6.0 |
| Overhead | - | (15) | <u>(15)</u> | (15) | <u>(15)</u> | (15) | <u>(15)</u> |
| | | | 9.2 | | 8.8 | | 10 |

Calculations of their expectation values

$$EV_1 = (0.2 \times 15) + (0.3 \times 25) + (0.3 \times 17) + (0.2 \times 43) + (-15) = 9.2$$

$$EV_2 = (0.2 \times 17) + (0.3 \times 43) + (0.3 \times 15) + (0.2 \times 25) + (-15) = 8.8$$

$$EV_3 = (0.2 \times 20) + (0.3 \times 20) + (0.3 \times 30) + (0.2 \times 30) + (-15) = 10$$

$$\text{Expected turnover of Retailer 1} = 9.2 \times 10^3 \text{ GH}\text{¢}$$

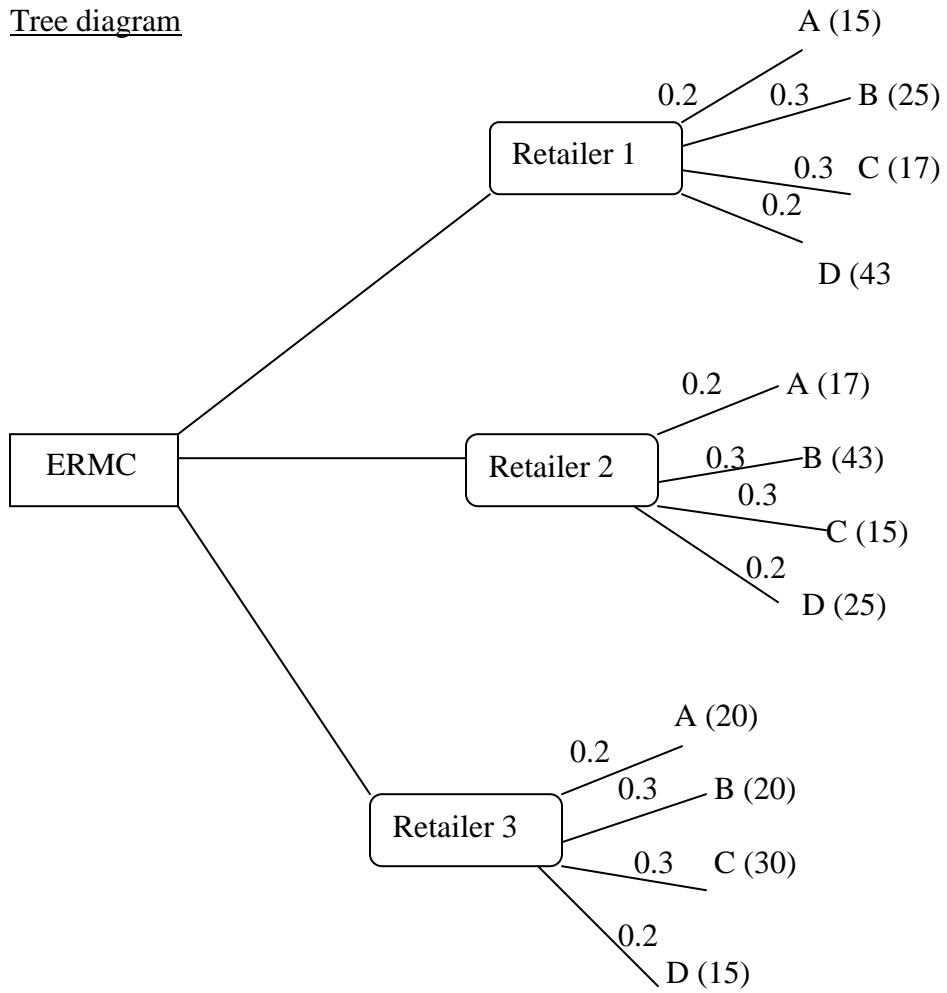

$$\text{Expected turnover of Retailer 2} = 8.8 \times 10^3 \text{ GH}\text{¢}$$

$$\text{Expected turnover of Retailer 3} = 10 \times 10^3 \text{ GH}\text{¢}$$

i) Ranking

$$\text{Retailer 3} \geq \text{Retailer 1} \geq \text{Retailer 2}$$

ii) Tree diagram

QUESTION 5

(ii)

(iii)

| <u>X</u> | <u>Y</u> | <u>XY</u> | <u>X²</u> | <u>Y²</u> |
|--------------|--------------|-----------------|----------------------|----------------------|
| 13 | 10 | 130 | 169 | 100 |
| 8 | 11 | 88 | 64 | 121 |
| 7 | 13.6 | 95.2 | 49 | 184.96 |
| 15 | 5.6 | 84 | 225 | 31.36 |
| 12.6 | 15.2 | 191.52 | 158.76 | 231.04 |
| 16 | 5 | 80 | 256 | 25.0 |
| 7 | 16 | 112 | 49 | 256.0 |
| 4 | 17 | 68 | 16 | 289.0 |
| 17 | 4 | 68 | 289 | 16.0 |
| 13 | 7 | 91 | 169 | 49.0 |
| 11 | 9 | 99 | 121 | 81.0 |
| <u>6.6</u> | <u>13.0</u> | <u>85.8</u> | <u>43.56</u> | <u>169.0</u> |
| <u>130.2</u> | <u>126.4</u> | <u>1,192.52</u> | <u>1,609.32</u> | <u>1,553.36</u> |

$$r = \frac{n \sum xy - \sum x \sum y}{\sqrt{[n \sum x^2 - (\sum x)^2][n \sum y^2 - (\sum y)^2]}}$$

$$r = \frac{12(1,192.52) - (130.2)(126.4)}{\sqrt{[12(1,609.32) - (130.2)^2][12(1,553.36) - (126.4)^2]}}$$

$$= \frac{14310.24 - 16457.28}{\sqrt{(19311.84 - 16952.04)(18640.32 - 15976.96)}}$$

$$= \frac{-2147.04}{\sqrt{(2359.8)(2663.36)}}$$

$$= \frac{-2147.04}{\sqrt{6284996.928}} = \frac{-2147.04}{2506.99}$$

$$= \underline{\underline{-0.86}}$$

iii) There is a strong inverse correlation between Marks in x and Marks in y,

QUESTION 6

a) Lend time: Elapsed time between depleted stock and replenished stock.

Stock-out: The period that stock level falls below zero level.

$$b) \quad TC(q) = C_o \left[\frac{D}{q} \right] + C_n \left[\frac{q}{2} \right]$$

$$\frac{dTC(q)}{dq} = - C_o \frac{D}{q^2} + \frac{C_n}{2}$$

$$\frac{d^2TC(q)}{dq^2} = 2 C_o \frac{D}{q^3} > 0$$

At stationery point, $\frac{dTC(q)}{dq} = 0$, implying that

$$\frac{C_o D}{q^2} = \frac{C_n}{2}$$

$$\text{or } q^2 = \frac{2C_o D}{C_n}$$

$$\text{or } q = \pm \sqrt{\frac{2C_o D}{C_n}}$$

But $q \geq 0$, thence $q_o = \sqrt{\frac{2C_o D}{C_n}}$, called EOQ

$$TC(q) = C_o \left[\frac{D}{q_o} \right] + C_n \left[\frac{q_o}{2} \right]$$

$$\text{where } q_o = \sqrt{\frac{2C_o D}{C_n}}$$

c) We calculate

$$EOQ = q_o = \sqrt{\frac{2C_o D}{C_n}}$$

Where,

i) $D = 12,000$ sachets/year

$C_o = \text{GH}¢20/\text{order}$

$C_n = 10\%$ per annum of the stock value per item
 $= 0.1 \times \text{GH}¢4.50$ per sachet per year

$$\therefore q_o = \sqrt{\frac{2 \times 20 \times 12,000}{0.1 \times 4.5}}$$

$$= 1032.79$$

$$= 1033$$

$$\text{EOQ} = 3266$$

ii) $\text{TC}(q_o) = 20 \left[\frac{12,000}{3,266} \right] + (0.1) \left[\frac{3,266}{2} \right]$

$$= 73.48 + 163.3$$

$$= 236.78$$

i.e $\text{TC} = \text{GH}¢236.78$

$$\text{TC}(q_o) = 20 \left[\frac{12,000}{1,032.8} \right] + 0.45 \left[\frac{1,032.8}{2} \right]$$

$$= 232.4 + 232.4$$

$$= \underline{464.8}$$

QUESTION 7

(i)

(ii)

B2

(iii)

(ii) $TC = 75 + 4Q$

$$\frac{dTC}{dQ} = MC = 4$$

$$TR = 12Q - 0.06Q^2$$

$$\frac{dTR}{dQ} = MR = 12 - 0.12Q$$

(iii) From graph, profit maximizing output = 68.

(iv) Profit = $12Q - 0.06Q^2 - 75 - 4Q = 8Q - 0.06Q^2 - 75$

When $Q = 68$

$$\begin{aligned} \text{Profit} &= 8(68) - 0.06(68)^2 - 75 = 544 - 231.2 - 75 \\ &= \underline{191.2} \end{aligned}$$
